Product Information

The UK Terrorism threat level set by JTAC (Joint Terrorism Analysis Centre) as of January 2024 is substantial, which means an attack is likely.

Since 2018, nine Terrorist attacks have taken place in the UK, killing six and injuring twenty. In the same period, over thirty late-stage plots targeting public figures and “iconic” sites in the UK were foiled by UK intelligence services & counter terrorism police.

With rising conflict across the globe, the United Kingdom faces an increased threat from domestic terrorism, which is less predictable and harder to detect. There are many emerging drivers of Terrorism threat which increased the possibility that individuals in the UK, without links to groups abroad could be inspired or radicalised to conduct terrorist attacks in response the conflicts across the world. With this in mind, the need for insuring against these risks under a standalone policy, offering broad coverage is of greater importance.

Our product provides protection for material damage & business interruption including non-damage business interruption, against attacks committed for political, religious, or ideological purposes whether acting alone or in connection with any group or organisation.
